

SPECIFICATIONS

CDQX36 SERIES

Notes:

3. Specifications are subject to change without notice.

^{1.} All dimensions are in millimeters (inches).

^{2.} Tolerance is \pm 0.25mm (0.01") unless otherwised noted.

PART NUMBER DESCRIPTION

Part Number	Chip Material	Color of Emission	Lens Type	Description
CDQA36R1W	GaAsP	Red	White Segment	Common Anode
CDQC36R1W	GaAsP	Red	White Segment	Common Cathode
CDQA36RR1W	AlGaAs	Super Red	White Segment	Common Anode
CDQC36RR1W	AlGaAs	Super Red	White Segment	Common Cathode
CDQA36Y1W	GaAsP	Yellow	White Segment	Common Anode
CDQC36Y1W	GaAsP	Yellow	White Segment	Common Cathode
CDQA36G1W	GaP	Green	White Segment	Common Anode
CDQC36G1W	GaP	Green	White Segment	Common Cathode

OPTICAL-ELECTRICAL CHARACTERISTICS

SOLDERING CONDITIONS - DISPLAY

- * Solder the LED no closer than 3mm from the base of the epoxy bulb. Soldering beyond the base of the tie bar is recommended.
- * Recommended soldering conditions

Dip Soldering				
Pre-Heat	100 °C Max			
Pre-Heat Time	60 Second Max			
Solder Bath Temperature	260 °C Max			
Dippng Time	5 Second Max			
Dipping Position	No lower than 3mm from the base of the epoxy			

Hand Soldering					
	3mm Series	Others			
Temperature Soldering Time Position	300 °C Max 3 Second Max No closer than 3mm from the base of the epoxy	350 °C Max 3 Second Max No closer than 3mm from the base of the epoxy			

- * Do not apply any stress to the lead. Particularly when heated.
- * The LED must not be repositioned after soldering.
- * After soldering the LEDs, the epoxy bulb should be protected from mechanical shock or vibration until the LEDs return to room temperature.
- * Direct soldering onto a PC board should be avoided. Mechanical stress to the resin may be caused by the PC board warping or from the clinching and cutting of the leadframes. When it is absolutely necessary, the LEDs may be mounted in this fashion, but, the user will assume responsibility for any problems. Direct soldering should only be done after testing has confirmed that no damage, such as wire bond failure or resin deterioration, will occur. LEDs should not be soldered directly to double sided PC boards because the heat will deteriorate the epoxy resin.
- * When it is necessary to clamp the LEDs to prevent soldering failure, it is important to minimize the mechanical stress on the LEDs.
- * Cut the LED leadframes at room temperature. Cutting the leadframes at high temperature may cause LED failure.
